

Reviewer's report

Title: Seasonal presence of enteric viruses and indicator bacteria for evaluating water quality in the South region of Mexico City

Version: 1 **Date:** 17 January 2009

Reviewer: Rashed Al-Sa`ed

Reviewer's report:

- shorten the methods on describing the PCR technique; show some results of using this method to clarify the origin of FC; number of samples (10) along 2 years control/monitoring is too small to carry correlations and use statistical methods

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
