Cover letter

Dear editor,

I made an error while submitting the revised article. I added the tables as additional files and it remained a yellow highlight. This is now corrected.

Please find our corrected article. We accommodated all the suggested modifications.

1. A reference for the WHO hair mercury limit is now given (World Health Organization. International Programme on Chemical Safety: *Methylmercury. Environmental Health Criteria 101*. Geneva; 1990. [<http://www.inchem.org/documents/ehc/ehc/ehc101.htm>]).
2. Yellow highlights have been removed.
3. We corrected the word “natom” to “ng atom O/min/mg”.
4. The abbreviations appear now in one paragraph.
5. The English language has been corrected by a professional, Christine Schwimmer.
